- PHP options

PHP options

`--enable-maintainer-mode`
Enable make rules and dependencies not useful (and sometimes confusing) to the casual installer.

`--with-config-file-path=PATH`
Sets the path in which to look for ENTITY, defaults to `PREFIX/lib`.

`--disable-short-tags`
Disable the short-form ENTITY? start tag by default.

`--with-libdir`
Specifies the directory where the libraries to build PHP exist on a Unix system. For 64bit systems, its needed to specify this argument to the `lib64` directory like: `--with-libdir=lib64`.

`--enable-zts`
Enables thread safety. Prior to PHP 8.0.0 on non-Windows systems, the option was called `--enable-maintainer-zts`.
