Relative class types

□□

- self
- parent
- static

These type declarations can only be used within classes.

`self`

The value must be an ENTITY the same class as the one in which the type declaration is used.

`parent`

The value must be an ENTITY a parent of the class in which the type declaration is used.

static

`static` is a return-only type which requires that the value returned must be an ENTITY the same class as the one the method is called in. Available as of PHP 8.0.0.
