Email Field

□□

- Key Features
- Settings

The Email field provides a specialized input for email addresses. It includes built-in validation to ensure proper email format and can be configured with custom display options.

Key Features

- Email format validation
- Custom placeholder text
- Prepend/append text options
- Required field validation
- Multiple email support

Settings

- Default Value - Set a default email address
- Placeholder - Custom placeholder text
- Prepend - Add text before the input
- Append - Add text after the input
