Post Object Field

□□

- Key Features
- Settings

The Post Object field creates relationships with other WordPress posts, pages, or custom post types. It provides an intuitive interface for selecting and linking to other content.

Key Features

- Content relationship management
- Multiple post type support
- Advanced search functionality
- Single or multiple selection
- Bidirectional relationships

Settings

- Post Type - Select available content types
- Taxonomy - Filter by taxonomy terms
- Allow Null - Make selection optional
- Multiple Values - Allow multiple selections
- Return Format - Object, ID, or custom
