- @param string $message error message.
- @return void

`acf_get_validation_errors()`

Retrieve validation errors.

- Alias of acf()->validation->function()
- @type function
- @date 6/10/13
- @since ACF 5.0.0
- @return array|bool

acf_get_validation_error()

Get the validation error.

- Alias of acf()->validation->get_error()
- @type function
- @date 6/10/13
- @since ACF 5.0.0
- @since SCF 6.4.1 Added the $input parameter, which is required in the get_error method.
- @param string $input name attribute of DOM element.
- @return string|bool

acf_reset_validation_errors()

Reset Validation errors.

- Alias of acf()->validation->reset_errors()
- @type function
- @date 6/10/13
- @since ACF 5.0.0
- @return void

acf_validate_save_post()

This function will validate $_POST data and add errors

- @type function
- @date 25/11/2013
- @since ACF 5.0.0
- @param bool $show_errors if true, errors will be shown via a wp_die screen.
- @return bool

acf_validate_values()

This function will validate an array of field values

- @type function
- @date 6/10/13
- @since ACF 5.0.0

- @param array $values An array of field values.
- @param string $input_prefix The input element's name attribute.
- @return void

`acf_validate_value()`

This function will validate a field's value

- @type function
- @date 6/10/13
- @since ACF 5.0.0
- @param mixed $value The field value to validate.
- @param array $field The field array.
- @param string $input The input element's name attribute.
- @return boolean
