Description

`systemd-hwdb` expects a command and command specific arguments. It manages the binary hardware database.

Options

`--usr`
Generate in /usr/lib/udev instead of /etc/udev.

`-r`; `--root=PATH`
Alternate root path in the filesystem.

`-s`; `--strict`
When updating, return non-zero exit value on any parsing error.

systemd-hwdb [<options>] update

Update the binary database.

systemd-hwdb [<options>] query <MODALIAS>

Query database and print result.
