systemd-integritysetup-generator

Unit generator for integrity protected block devices

`/usr/lib/systemd/system-generators/systemd-integritysetup-generator`

Description

`systemd-integritysetup-generator` is a generator that translates `/etc/integritytab` entries into native systemd units early at boot. This will create `systemd-integritysetup@.service(8)` units as necessary.

`systemd-integritysetup-generator` implements `systemd.generator(7)`.
