Traefik AddPrefix Documentation

- Configuration Examples
- Configuration Options

The `addPrefix` middleware updates the path of a request before forwarding it.

Configuration Examples

```
# Prefixing with /foo
http:
  middlewares:
    add-foo:
      addPrefix:
        prefix: "/foo"
```

```
# Prefixing with /foo
[http.middlewares]
  [http.middlewares.add-foo.addPrefix]
    prefix = "/foo"
```

```
# Prefixing with /foo
labels:
  - "traefik.http.middlewares.add-foo.addprefix.prefix=/foo"
```

```
// Prefixing with /foo
{
  // ...
  "Tags": [
```

```
    "traefik.http.middlewares.add-foo.addprefix.prefix=/foo"
  ]
}
```

```
# Prefixing with /foo
apiVersion: traefik.io/v1alpha1
kind: Middleware
metadata:
  name: add-foo
spec:
  addPrefix:
    prefix: /foo
```

Configuration Options

Field	Description	Default	Required
`prefix`	String to add **before** the current path in the requested URL. It should include a leading slash (`/`).	""	Yes
