bf.add

□□

- Examples

Adds a single item to a bloom filter. If the specified bloom filter does not exist, a bloom filter is created with the provided name with default properties.

To add multiple items to a bloom filter, you can use the `BF.MADD` or `BF.INSERT` commands.

To create a bloom filter with non-default properties, use the `BF.INSERT` or `BF.RESERVE` command.

Examples

```
127.0.0.1:6379> BF.ADD key val
(integer) 1
127.0.0.1:6379> BF.ADD key val
(integer) 0
```
