function-delete

□□

- Examples

Delete a library and all its functions.

This command deletes the library called *library-name* and all functions in it. If the library doesn't exist, the server returns an error.

For more information please refer to Introduction to Valkey Functions.

Examples

```
127.0.0.1:6379> FUNCTION LOAD "#!lua name=mylib \n server.register_function('myfunc',
function(keys, args) return 'hello' end)"
"mylib"
127.0.0.1:6379> FCALL myfunc 0
"hello"
127.0.0.1:6379> FUNCTION DELETE mylib
OK
127.0.0.1:6379> FCALL myfunc 0
(error) ERR Function not found
```
