# get

□□

- Examples

Get the value of `key`. If the key does not exist the special value `nil` is returned. An error is returned if the value stored at `key` is not a string, because `GET` only handles string values.

# Examples

```
127.0.0.1:6379> GET nonexisting
(nil)
127.0.0.1:6379> SET mykey "Hello"
OK
127.0.0.1:6379> GET mykey
"Hello"
```
