hdel

□□

- Examples

Removes the specified fields from the hash stored at `key`. Specified fields that do not exist within this hash are ignored. If `key` does not exist, it is treated as an empty hash and this command returns `0`.

Examples

```
127.0.0.1:6379> HSET myhash field1 "foo"
(integer) 1
127.0.0.1:6379> HDEL myhash field1
(integer) 1
127.0.0.1:6379> HDEL myhash field2
(integer) 0
```
