Aspect ratio image card

With the `aspect-ratio` property, as you resize the card, the green visual block maintains this 16 x 9 aspect ratio. We are respecting the aspect ratio with `aspect-ratio: 16 / 9`.

```
.video {
  aspect-ratio: 16 / 9;
}
```

To maintain a 16 x 9 aspect ratio without this property, you'd need to use a `padding-top` hack and give it a padding of `56.25%` to set a top-to-width ratio. We will soon have a property for this to avoid the hack and the need to calculate the percentage. You can make a square with `1 / 1` ratio, a 2 to 1 ratio with `2 / 1`, and really just anything you need for this image to scale with a set size ratio.

```
.square {
  aspect-ratio: 1 / 1;
}
```
