

Multiselect

- [Config methods](#)
 - [add_options\(\\$options \)](#)
 - [set_options\(\\$options \)](#)
-

Creates a multiselect (tag-style) box with pre-defined options.

```
Field::make( 'multiselect', 'crb_available_colors', __( 'Available Colors' ) )
```

Config methods

add_options(\$options)

Add an associative array with options or a [callable](#).

The method can be called multiple times, in which case the options between the calls will be appended (instead of overwritten).

set_options(\$options)

Set options as an associative array or a [callable](#).

The method is not intended to be called multiple times – each call will overwrite the previous options.

!> If you provide an indexed array with no key values, the default indexes (**0, 1, 2 ...**) of the elements will be used.

```
Field::make( 'multiselect', 'crb_available_colors', __( 'Available Colors' ) )  
  
[]->add_options( array(  
    [] 'red' => 'Red',  
    [] 'green' => 'Green',  
))
```

```
    'blue' => 'Blue',  
  ) )
```

```
