WP_CLI::colorize()

- Usage
- Notes
- Related

Colorize a string for output.

Usage

```
WP_CLI::colorize( $string )
```

$string (string) String to colorize for output, with color tokens.
@return (string) string.

Notes

Yes, you can change the color of command line text too. For instance, here's how `WP_CLI::success()` colorizes "Success: "

```
WP_CLI::colorize( "%GSuccess:%n " )
```

Uses `\cli\Colors::colorize()` to transform color tokens to display settings. Choose from the following tokens (and note 'reset'):

- %y => ['color' => 'yellow'],
- %g => ['color' => 'green'],
- %b => ['color' => 'blue'],
- %r => ['color' => 'red'],
- %p => ['color' => 'magenta'],
- %m => ['color' => 'magenta'],
- %c => ['color' => 'cyan'],

- %w => ['color' => 'grey'],
- %k => ['color' => 'black'],
- %n => ['color' => 'reset'],
- %Y => ['color' => 'yellow', 'style' => 'bright'],
- %G => ['color' => 'green', 'style' => 'bright'],
- %B => ['color' => 'blue', 'style' => 'bright'],
- %R => ['color' => 'red', 'style' => 'bright'],
- %P => ['color' => 'magenta', 'style' => 'bright'],
- %M => ['color' => 'magenta', 'style' => 'bright'],
- %C => ['color' => 'cyan', 'style' => 'bright'],
- %W => ['color' => 'grey', 'style' => 'bright'],
- %K => ['color' => 'black', 'style' => 'bright'],
- %N => ['color' => 'reset', 'style' => 'bright'],
- %3 => ['background' => 'yellow'],
- %2 => ['background' => 'green'],
- %4 => ['background' => 'blue'],
- %1 => ['background' => 'red'],
- %5 => ['background' => 'magenta'],
- %6 => ['background' => 'cyan'],
- %7 => ['background' => 'grey'],
- %0 => ['background' => 'black'],
- %F => ['style' => 'blink'],
- %U => ['style' => 'underline'],
- %8 => ['style' => 'inverse'],
- %9 => ['style' => 'bright'],
- %_ => ['style' => 'bright']

Internal API documentation is generated from the WP-CLI codebase on every release. To suggest improvements, please submit a pull request.
