UI components for managing WordPress Global Styles.

Installation

Install the module:

```
npm install @wordpress/global-styles-ui --save
```

Usage

```
import { GlobalStylesUI } from '@wordpress/global-styles-ui';

function MyComponent() {
    return (
        <GlobalStylesUI
            value={ userStyles }
            baseValue={ themeStyles }
            onChange={ handleChange }
        />
    );
}
```

API

GlobalStylesUI

Main component for the Global Styles editor interface.

Props:

- `value` (GlobalStylesConfig): User's custom global styles
- `baseValue` (GlobalStylesConfig): Theme's default global styles
- `onChange` (Function): Callback when styles change
- `path` (string, optional): Current navigation path
- `onPathChange` (Function, optional): Callback when path changes
- `fontLibraryEnabled` (boolean, optional): Enable font library features
- `serverCSS` (array, optional): Server CSS styles
- `serverSettings` (object, optional): Server settings
