@wordpress/interactivity

- Installation
- License

The package `@wordpress/interactivity` contains the logic that enables the Interactivity API which was introduced in WordPress Core in v6.5. This means this package is already bundled in Core in any version of WordPress higher than v6.5.

> Check the Interactivity API Reference docs in the Block Editor handbook to learn more about the Interactivity API.

Installation

Install the Interactivity API using the command:

```
npm install @wordpress/interactivity --save
```

This step is only required if you use the Interactivity API outside WordPress.

Within WordPress, the package is already bundled in Core. To ensure it's loaded, add `@wordpress/interactivity` to the dependency array of the script module. This process is often done automatically with tools like `wp-scripts`.

Furthermore, this package assumes your code will run in an **ES2015+** environment. If you're using an environment with limited or no support for such language features and APIs, you should include the polyfill shipped in `@wordpress/babel-preset-default` in your code.

License

Interactivity API proposal, as part of Gutenberg and the WordPress project is free software, and is released under the terms of the GNU General Public License version 2 or (at your option) any later

version. See LICENSE.md for complete license.
