title: graphql_interface_fields hookType: filter hookGroup: schema-registration plugin: wp-graphql

graphql_interface_fields

```
apply_filters( 'graphql_interface_fields', $fields, $type_name );
```

Filter all interface fields, passing the $typename as a param This is useful when several different types need to be easily filtered at once. . .for example, if ALL types with a field of a certain name needed to be adjusted, or something to that tune

- **Type:** filter
- **Group:** Schema Registration
- **Since:** 0.0.5
- **Source File:** `plugins/wp-graphql/src/Type/WPInterfaceType.php`

Parameters

- `$fields` (`array<string,array<string,mixed>>`): The array of fields for the object config
- `$type_name` (`string`): The name of the object type.

Source

- `plugins/wp-graphql/src/Type/WPInterfaceType.php:136`

```
apply_filters( 'graphql_interface_fields', $fields, $type_name );
```
