Block Patterns

- Schema
- Retrieve a Block Pattern

Schema

The schema defines all the fields that exist within a block pattern record. Any response from these endpoints can be expected to contain the fields below unless the `_filter` query parameter is used or the schema field only appears in a specific context.

`name`	The pattern name. JSON data type: string Read only Context: `view`, `edit`, `embed`
`title`	The pattern title, in human readable format. JSON data type: string Read only Context: `view`, `edit`, `embed`
`content`	The pattern content. JSON data type: string Read only Context: `view`, `edit`, `embed`
`description`	The pattern detailed description. JSON data type: string Read only Context: `view`, `edit`, `embed`
`viewport_width`	The pattern viewport width for inserter preview. JSON data type: number Read only Context: `view`, `edit`, `embed`
`inserter`	Determines whether the pattern is visible in inserter. JSON data type: boolean Read only Context: `view`, `edit`, `embed`

`categories`	The pattern category slugs. JSON data type: array Read only Context: `view`, `edit`, `embed`
`keywords`	The pattern keywords. JSON data type: array Read only Context: `view`, `edit`, `embed`
`block_types`	Block types that the pattern is intended to be used with. JSON data type: array Read only Context: `view`, `edit`, `embed`
`post_types`	An array of post types that the pattern is restricted to be used with. JSON data type: array Read only Context: `view`, `edit`, `embed`
`template_types`	An array of template types where the pattern fits. JSON data type: array Read only Context: `view`, `edit`, `embed`
`source`	Where the pattern comes from e.g. core JSON data type: string Read only Context: `view`, `edit`, `embed` One of: `core`, `plugin`, `theme`, `pattern-directory/core`, `pattern-directory/theme`, `pattern-directory/featured`
