## Schema

The schema defines all the fields that exist within a post record. Any response from these endpoints can be expected to contain the fields below unless the `\_filter` query parameter is used or the schema field only appears in a specific context.

|              |                                                                                                                                                                                                                                                                      |
|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| date         | <p>The date the post was published, in the site's timezone.</p> <p>JSON data type: string or null,</p> <p>Format: datetime (<a href="#">details</a>)</p> <p>Context: <a href="#">view</a>, <a href="#">edit</a>, <a href="#">embed</a></p>                           |
| date_gmt     | <p>The date the post was published, as GMT.</p> <p>JSON data type: string or null,</p> <p>Format: datetime (<a href="#">details</a>)</p> <p>Context: <a href="#">view</a>, <a href="#">edit</a></p>                                                                  |

| modified     | <p>The date the post was last modified, in the site's timezone.</p> <p>JSON data type: string,</p> <p>Format: datetime (<a href="#">details</a>)</p> <p>Read only</p> <p>Context: <a href="#">view</a>, <a href="#">edit</a></p>                                     |
| modified_gmt | <p>The date the post was last modified, as GMT.</p> <p>JSON data type: string,</p> <p>Format: datetime (<a href="#">details</a>)</p> <p>Read only</p> <p>Context: <a href="#">view</a>, <a href="#">edit</a></p>                                                     |
| slug         | <p>An alphanumeric identifier for the post unique to its type.</p> <p>JSON data type: string</p> <p>Context: <a href="#">view</a>, <a href="#">edit</a>, <a href="#">embed</a></p>                                                                                   |
| status       | <p>A named status for the post.</p> <p>JSON data type: string</p> <p>Context: <a href="#">view</a>, <a href="#">edit</a></p> <p>One of: <a href="#">publish</a>, <a href="#">future</a>, <a href="#">draft</a>, <a href="#">pending</a>, <a href="#">private</a></p> |
| type         | <p>Type of post.</p> <p>JSON data type: string</p> <p>Read only</p> <p>Context: <a href="#">view</a>, <a href="#">edit</a>, <a href="#">embed</a></p>                                                                                                                |
| password     | <p>A password to protect access to the content and excerpt.</p> <p>JSON data type: string</p> <p>Context: <a href="#">edit</a></p>                                                                                                                                   |

|                                 |                                                                                                                                                                                                                                                                                                                                     |
|---------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>permalink_template</code> | Permalink template for the post.<br>JSON data type: string<br>Read only<br>Context: <code>edit</code>                                                                                                                                                                                                                               |
| <code>generated_slug</code>     | Slug automatically generated from the post title.<br>JSON data type: string<br>Read only<br>Context: <code>edit</code>                                                                                                                                                                                                              |
| <code>title</code>              | The title for the post.<br>JSON data type: object<br>Context: <code>view</code> , <code>edit</code> , <code>embed</code>                                                                                                                                                                                                            |
| <code>content</code>            | The content for the post.<br>JSON data type: object<br>Context: <code>view</code> , <code>edit</code>                                                                                                                                                                                                                               |
| <code>author</code>             | The ID for the author of the post.<br>JSON data type: integer<br>Context: <code>view</code> , <code>edit</code> , <code>embed</code>                                                                                                                                                                                                |
| <code>excerpt</code>            | The excerpt for the post.<br>JSON data type: object<br>Context: <code>view</code> , <code>edit</code> , <code>embed</code>                                                                                                                                                                                                          |
| <code>featured_media</code>     | The ID of the featured media for the post.<br>JSON data type: integer<br>Context: <code>view</code> , <code>edit</code> , <code>embed</code>                                                                                                                                                                                        |
| <code>comment_status</code>     | Whether or not comments are open on the post.<br>JSON data type: string<br>Context: <code>view</code> , <code>edit</code><br>One of: <code>open</code> , <code>closed</code>                                                                                                                                                        |
| <code>ping_status</code>        | Whether or not the post can be pinged.<br>JSON data type: string<br>Context: <code>view</code> , <code>edit</code><br>One of: <code>open</code> , <code>closed</code>                                                                                                                                                               |
| <code>format</code>             | The format for the post.<br>JSON data type: string<br>Context: <code>view</code> , <code>edit</code><br>One of: <code>standard</code> , <code>aside</code> , <code>chat</code> , <code>gallery</code> , <code>link</code> , <code>image</code> , <code>quote</code> , <code>status</code> , <code>video</code> , <code>audio</code> |
| <code>meta</code>               | Meta fields.<br>JSON data type: object<br>Context: <code>view</code> , <code>edit</code>                                                                                                                                                                                                                                            |
| <code>sticky</code>             | Whether or not the post should be treated as sticky.<br>JSON data type: boolean<br>Context: <code>view</code> , <code>edit</code>                                                                                                                                                                                                   |
| <code>template</code>           | The theme file to use to display the post.<br>JSON data type: string<br>Context: <code>view</code> , <code>edit</code>                                                                                                                                                                                                              |

|            |                                                                                                                                     |
|------------|-------------------------------------------------------------------------------------------------------------------------------------|
| categories | The terms assigned to the post in the category taxonomy.<br>JSON data type: array<br>Context: <code>view</code> , <code>edit</code> |
| tags       | The terms assigned to the post in the post_tag taxonomy.<br>JSON data type: array<br>Context: <code>view</code> , <code>edit</code> |

# List Posts

Query this endpoint to retrieve a collection of posts. The response you receive can be controlled and filtered using the URL query parameters below.

## Definition

GET /wp/v2/posts

## Example Request

```
$ curl https://example.com/wp-json/wp/v2/posts
```

## Arguments

|                |                                                                                                                                                                                   |
|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| context        | Scope under which the request is made; determines fields present in response.<br>Default: <code>view</code><br>One of: <code>view</code> , <code>embed</code> , <code>edit</code> |
| page           | Current page of the collection.<br>Default: <code>1</code>                                                                                                                        |
| per_page       | Maximum number of items to be returned in result set.<br>Default: <code>10</code>                                                                                                 |
| search         | Limit results to those matching a string.                                                                                                                                         |
| after          | Limit response to posts published after a given ISO8601 compliant date.                                                                                                           |
| modified_after | Limit response to posts modified after a given ISO8601 compliant date.                                                                                                            |
| author         | Limit result set to posts assigned to specific authors.                                                                                                                           |

|                                 |                                                                                                                                                                                                                                                                                                           |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>author_exclude</code>     | Ensure result set excludes posts assigned to specific authors.                                                                                                                                                                                                                                            |
| <code>before</code>             | Limit response to posts published before a given ISO8601 compliant date.                                                                                                                                                                                                                                  |
| <code>modified_before</code>    | Limit response to posts modified before a given ISO8601 compliant date.                                                                                                                                                                                                                                   |
| <code>exclude</code>            | Ensure result set excludes specific IDs.                                                                                                                                                                                                                                                                  |
| <code>include</code>            | Limit result set to specific IDs.                                                                                                                                                                                                                                                                         |
| <code>offset</code>             | Offset the result set by a specific number of items.                                                                                                                                                                                                                                                      |
| <code>order</code>              | Order sort attribute ascending or descending.<br>Default: <code>desc</code><br>One of: <code>asc</code> , <code>desc</code>                                                                                                                                                                               |
| <code>orderby</code>            | Sort collection by post attribute.<br>Default: <code>date</code><br>One of: <code>author</code> , <code>date</code> , <code>id</code> , <code>include</code> , <code>modified</code> , <code>parent</code> , <code>relevance</code> , <code>slug</code> , <code>include_slugs</code> , <code>title</code> |
| <code>search_columns</code>     | Array of column names to be searched.                                                                                                                                                                                                                                                                     |
| <code>slug</code>               | Limit result set to posts with one or more specific slugs.                                                                                                                                                                                                                                                |
| <code>status</code>             | Limit result set to posts assigned one or more statuses.<br>Default: <code>publish</code>                                                                                                                                                                                                                 |
| <code>tax_relation</code>       | Limit result set based on relationship between multiple taxonomies.<br>One of: <code>AND</code> , <code>OR</code>                                                                                                                                                                                         |
| <code>categories</code>         | Limit result set to items with specific terms assigned in the categories taxonomy.                                                                                                                                                                                                                        |
| <code>categories_exclude</code> | Limit result set to items except those with specific terms assigned in the categories taxonomy.                                                                                                                                                                                                           |
| <code>tags</code>               | Limit result set to items with specific terms assigned in the tags taxonomy.                                                                                                                                                                                                                              |
| <code>tags_exclude</code>       | Limit result set to items except those with specific terms assigned in the tags taxonomy.                                                                                                                                                                                                                 |
| <code>sticky</code>             | Limit result set to items that are sticky.                                                                                                                                                                                                                                                                |

## Arguments

|                             |                                                                                                                                                                                                                                                         |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>date</code>           | The date the post was published, in the site's timezone.                                                                                                                                                                                                |
| <code>date_gmt</code>       | The date the post was published, as GMT.                                                                                                                                                                                                                |
| <code>slug</code>           | An alphanumeric identifier for the post unique to its type.                                                                                                                                                                                             |
| <code>status</code>         | A named status for the post.<br>One of: <code>publish</code> , <code>future</code> , <code>draft</code> , <code>pending</code> , <code>private</code>                                                                                                   |
| <code>password</code>       | A password to protect access to the content and excerpt.                                                                                                                                                                                                |
| <code>title</code>          | The title for the post.                                                                                                                                                                                                                                 |
| <code>content</code>        | The content for the post.                                                                                                                                                                                                                               |
| <code>author</code>         | The ID for the author of the post.                                                                                                                                                                                                                      |
| <code>excerpt</code>        | The excerpt for the post.                                                                                                                                                                                                                               |
| <code>featured_media</code> | The ID of the featured media for the post.                                                                                                                                                                                                              |
| <code>comment_status</code> | Whether or not comments are open on the post.<br>One of: <code>open</code> , <code>closed</code>                                                                                                                                                        |
| <code>ping_status</code>    | Whether or not the post can be pinged.<br>One of: <code>open</code> , <code>closed</code>                                                                                                                                                               |
| <code>format</code>         | The format for the post.<br>One of: <code>standard</code> , <code>aside</code> , <code>chat</code> , <code>gallery</code> , <code>link</code> , <code>image</code> , <code>quote</code> , <code>status</code> , <code>video</code> , <code>audio</code> |
| <code>meta</code>           | Meta fields.                                                                                                                                                                                                                                            |
| <code>sticky</code>         | Whether or not the post should be treated as sticky.                                                                                                                                                                                                    |
| <code>template</code>       | The theme file to use to display the post.                                                                                                                                                                                                              |
| <code>categories</code>     | The terms assigned to the post in the category taxonomy.                                                                                                                                                                                                |
| <code>tags</code>           | The terms assigned to the post in the post_tag taxonomy.                                                                                                                                                                                                |

## Definition

`POST /wp/v2/posts`

## Retrieve a Post

## Definition & Example Request

`GET /wp/v2/posts/<id>`

Query this endpoint to retrieve a specific post record.

```
$ curl https://example.com/wp-json/wp/v2/posts/<id>
```

## Arguments

|                       |                                                                                                                                                                                   |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>id</code>       | Unique identifier for the post.                                                                                                                                                   |
| <code>context</code>  | Scope under which the request is made; determines fields present in response.<br>Default: <code>view</code><br>One of: <code>view</code> , <code>embed</code> , <code>edit</code> |
| <code>password</code> | The password for the post if it is password protected.                                                                                                                            |

## Update a Post

## Arguments

|                             |                                                                                                                                                       |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>id</code>             | Unique identifier for the post.                                                                                                                       |
| <code>date</code>           | The date the post was published, in the site's timezone.                                                                                              |
| <code>date_gmt</code>       | The date the post was published, as GMT.                                                                                                              |
| <code>slug</code>           | An alphanumeric identifier for the post unique to its type.                                                                                           |
| <code>status</code>         | A named status for the post.<br>One of: <code>publish</code> , <code>future</code> , <code>draft</code> , <code>pending</code> , <code>private</code> |
| <code>password</code>       | A password to protect access to the content and excerpt.                                                                                              |
| <code>title</code>          | The title for the post.                                                                                                                               |
| <code>content</code>        | The content for the post.                                                                                                                             |
| <code>author</code>         | The ID for the author of the post.                                                                                                                    |
| <code>excerpt</code>        | The excerpt for the post.                                                                                                                             |
| <code>featured_media</code> | The ID of the featured media for the post.                                                                                                            |
| <code>comment_status</code> | Whether or not comments are open on the post.<br>One of: <code>open</code> , <code>closed</code>                                                      |
| <code>ping_status</code>    | Whether or not the post can be pinged.<br>One of: <code>open</code> , <code>closed</code>                                                             |

|                         |                                                                                                                                                                                                                                                         |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>format</code>     | The format for the post.<br>One of: <code>standard</code> , <code>aside</code> , <code>chat</code> , <code>gallery</code> , <code>link</code> , <code>image</code> , <code>quote</code> , <code>status</code> , <code>video</code> , <code>audio</code> |
| <code>meta</code>       | Meta fields.                                                                                                                                                                                                                                            |
| <code>sticky</code>     | Whether or not the post should be treated as sticky.                                                                                                                                                                                                    |
| <code>template</code>   | The theme file to use to display the post.                                                                                                                                                                                                              |
| <code>categories</code> | The terms assigned to the post in the category taxonomy.                                                                                                                                                                                                |
| <code>tags</code>       | The terms assigned to the post in the post_tag taxonomy.                                                                                                                                                                                                |

# Definition

POST /wp/v2/posts/<id>

# Example Request

```
$ curl -X POST https://example.com/wp-json/wp/v2/posts/<id> -d '{"title":"My New Title"}'
```

# Delete a Post

# Arguments

|                    |                                             |
|--------------------|---------------------------------------------|
| <code>id</code>    | Unique identifier for the post.             |
| <code>force</code> | Whether to bypass Trash and force deletion. |

# Definition

DELETE /wp/v2/posts/<id>

# Example Request

```
$ curl -X DELETE https://example.com/wp-json/wp/v2/posts/<id>
```
