Add images to your Article Schema

If you want to add an image to an object programmatically, you can do it as follows. Note that we use the `YoastSEO` surface to get both the `canonical` from the `meta` surface as the `helpers` surface to access the `schema->image` functionality.

```
add_filter( 'wpseo_schema_article', 'example_change_article' );

/**
 * Adds images to Article Schema data.
 *
 * @param array $data Schema.org Article data array.
 *
 * @return array Schema.org Article data array.
 */
function example_change_article( $data ) {
    // This is the attachment ID for our image.
    $attachment_id = 12345;

    // We're going to create a graph piece for our image. Every graph piece always needs a
Schema ID, so it can
    // be referenced by other graph pieces, best practice is to base that on the canonical
adding an ID that's
    // always going to be unique.
    $schema_id     = YoastSEO()->meta->for_current_page()->canonical . '#/schema/image/' .
$attachment_id;
    $data['image'] = new WPSEO_Schema_Image( $schema_id );
```

```
    return $data;
}
```

Instead of `YoastSEO()->helpers->schema->image->generate_from_attachment_id()` you can also use `YoastSEO()->helpers->schema->image->generate_from_url()` which takes, as you've guessed, a URL as input.

To make more changes to our Schema output, see the Yoast SEO Schema API.
